Title : Oxygen and Sand Cutting of Stainless Chromnickel and  
Two-Layer Steels.

Periodical : Avtom. svar., 2, 89-92, Mr/Ap 1956

Abstract : Because oxygen cutting with iron-rich fusing powder can-  
not be used for stainless steel or two-layer steel less than  
10 mm in thickness, several other shortcomings, a new method  
of cutting such steels has been developed. The authors  
describe the oxygen and sand cutting of stainless steels  
from 4 to 100 mm thick and two-layer steels up to 46 mm  
thick. The equipment used, as well as the sand required  
for the operation are also discussed. This new method of  
cutting steels has been put into use at the Ural Chemical  
Machinery Plant. The authors claim the improved efficiency

AUTHOR: Korf, O. Ya.; Skudra, A. M.

TITLE: On generalized rheological models

SOURCE: AN LatSSR. Odeleniye fizicheskikh i tekhnicheskikh nauk. Voprosy dinamiki i prochnosti, no. 11, 1964, 103-125

TOPIC TAGS: rheological model, creep behavior, creep model, creep analysis, linear elastoplastic solid, rheological strain equation

ABSTRACT: Rheological models are used in phenomenological description of time-dependent behavior of materials without regard to the causes producing these phenomena. Simple models for qualitative creep-analysis problem show certain inconsistencies which limit their application: the creep curves of materials under investigation must be simple exponential curves, no residual creep strains should remain after unloading, and under constant stress the instant

Card 1/2

L 23463-65

ACCESSION NR: AT5003521

of creep beginning is uncertain. In order to remove these inconsistencies, a further development of the theory of rheological models is presented in the article. The model of a linear standard solid is generalized by introduction of time-dependent coefficients of viscosity and internal friction. A model which comprises the elements describing the rheological creep behavior and incomplete strain relaxation after unloading is constructed. Equations are derived which describe the rheological properties of a linear elastoplastic solid characterized by such quantities as instantaneous and regular elasticity moduli, and time-dependent functions of relaxation and internal friction. A rheological equation of the state of strain of a solid is derived which contains six coefficients associated with the above quantities; the method of determining these coefficients is given.

"Therapeutic Use of the Drug 'RD,'" Prof Ya. N.  
Korganov

"Nevropatol i Psikiat" Vol XX, No 3, p 88

Short summary on author's lecture at the 1949 Session of the Rostov Soc of Neuropathologists and Psychiatrists. "RD" has been used not only against chorea, but also against neurosyphilis. Results were positive. The drug is well tolerated by the patients, and its toxicity is slight. Its use is recommended.

KORGANOV, Ya.N.

#Treatment of neuroinfections with 'preparation RD' ("ussian text) KLIN. MED. (Mosk.)  
1953, 31/8 (72-73)

'Preparation RD' was originally isolated from the lipid fraction of diphtheria bacilli. This substance is a mixture of at least 3 higher fatty oxy-acids and is related to cerebrosides. It is yellowish, waxy in appearance and possesses some antibacterial properties against tb and leprosy bacilli. A total of 66 patients with epidemic encephalitis, infectious cerebral palsy, neurosyphilis, and infectious polyneuritis, were treated. Daily i.m. injections of 1.0 ml. of 2 % solution were given to patients over 30 days. The injections, which were painful, were replaced by oral administration of 3 tablets daily, each containing 0.01 g. pure substance. From 5 to 150 tablets were given in all. It was concluded that the preparation RD is undoubtedly beneficial in acute infections of the nervous system, especially in infectious palsy. Early administration of RD was also found of benefit in neurosyphilis and in infectious polyneuritis. In chronic diseases of the nervous system the results were negative. AUTHOR: Kulikovskiy, L. F.; Korganova, O. G.

TITLE: Current and voltage stabilizers with weight-type reference element

SOURCE: IVUZ. Priborostroyeniye, v. 8, no. 4, 1965, 31-35

TOPIC TAGS: voltage regulator, current stabilization, photoresistor

ABSTRACT: The authors describe the operation of the dc voltage stabilizer shown in fig. 1 of the Enclosure. The supply voltage  $U_{in}$  is fed to the input of a bridge made up of the two resistors  $R_1$  and  $R_2$  and the two photoresistors  $F_1$  and  $F_2$ . This bridge operates in unbalanced conditions. Current  $I$  flows through the load circuit and frame 1 of a permanent-magnet converter, creating torque. An opposing moment is created by weight 2 which is fastened directly to one side of the frame. The maximum angle of rotation of the frame is  $0.05^\circ$  which is determined by limiters 3, so that the counter-torque is a constant value. If the equilibrium of the system is upset by a change in  $U_{in}$  or  $R_{load}$ , mirror 4 is tilted and redistributes the

Card 1/3

L 2955-66

ACCESSION NR: AP5021435

light flux from illuminator 5 between photoresistors  $F_1$  and  $F_2$  in such a way that the current  $I$  is brought back to the original value and equilibrium is restored. The stabilizer operates reliably between 80 and 320 volts with a stabilizing current (without amplification) of 5 ma, a load resistance of  $1\text{K}\Omega$ , and stabilization factor of 5260. The relative error with a voltage change from 8 to 320 volts is 0.05%. If the permanent-magnet converter is replaced by an electrodynamic converter, an ac stabilizer is obtained which is just as accurate as the dc version and does not distort the waveform. Orig. art. has: 2 figures, 9 formulas.

" First National Conference on Drving Techniques in the Textile Industry "

Zdravotni Technika a Vzduchotechnika, Prague, Vol 6, №2, 63,  
pp 92-93.

Abstract: The conference has been organized by the Commission for Public Health Technology and Air Conditioning of the Czechoslovak Scientific and Technological Society in cooperation with the Society's plant section "Wool Association" on 6 - 8 June, 1962 in Brno with the purpose of popularizing achievements in the research and development of drving systems in the textile industry among designers of this type equipment.

TITLE:

On the Problem of the Mechanism of Reaction Between Alcohols  
and Halogen Hydracids

PERIODICAL:

Doklady Akademii nauk SSSR, 1959, Vol 127, Nr 2, pp 380-383  
(USSR)

ABSTRACT:

To clarify the reaction mentioned in the title, an investigation was made of the chlorination of absolute ethanol as well as of two different aqueous ethanol solutions in the temperature range 100 - 140°C. Table 1 gives the values of the molecular constant  $k_1^o$  of the reaction rate for HCl concentrations  $> 0.1 \text{ mol/l}$ ,

Table 2 the values for  $\text{HCl} < 0.1 \text{ mol/l}$ . Reaction is monomolecular at  $\text{HCl} > 0.1 \text{ mol/l}$ . With  $\text{HCl} < 0.1 \text{ mol/l}$  the order of reaction rises. Table 3 shows the electrical conductivity of the HCl solutions in absolute ethanol at  $101^\circ$  in a concentration range of from  $3.2 \cdot 10^{-4}$  to  $0.5 \text{ mol/l}$ . Proceeding from C. N. Hinshelwood's assumption (Ref 4) that in slow reaction stages dehydration of ion pairs occurs, the reaction constant  $k_1$  for

Card 1/3

On the Problem of the Mechanism of Reaction Between  
Alcohols and Halogen Hydracids

SOV/20-127-2-40/70

low HCl concentrations is computable according to the following formula based on the dependence of the concentration of the ion pairs on the HCl concentration:  $k_1 = k_1^0 \frac{1 - \lambda/\lambda_\infty}{1 - \lambda_0/\lambda_\infty}$  (5).

Herein,  $\lambda/\lambda_\infty$  is the mean value of the dissociation degree of the ion pairs in the concentration range of HCl, in which  $k_1^0$  was measured. As is shown in table 2, the values obtained with (5) are in good agreement with experimental data. This confirms Hinshelwood's hypothesis. Table 1 reveals that water added to ethanol inhibits chlorination. This is explained by the inhibiting effect of basic additions to the reaction of acid catalysis. The protonized particles (ethoxonium ions) enter reaction with water, involving a drop in their concentration and consequently also of the reaction rate. The following equilibrium is brought about:  $H_3O^+ + C_2H_5OH \rightleftharpoons C_2H_5OH^+ + H_2O$ . The concentration constant of this equilibrium was measured by means of p-nitroaniline as indicator in the temperature range of from 15 to 45° in 96.6% ethanol. The values of K obey to the

Card 2/3

Alcohols and Halogen Hydracids

SOV/20-127-2-40/70

equation  $\lg K = 7.67/4.574 - 5109/4.574T$  (?). The values extrapolated therefrom for the temperature range  $110 - 130^\circ$  (Table 4) are in good agreement with experimental data. If dehydration of the ion pairs is the stage limiting the reaction rate, the reaction between HBr and ethanol is expected to occur more quickly in consequence of the high nucleophilic nature of Br<sup>-</sup>. This is confirmed by provisional data. The authors thank the student L. Ploom for assistance in the experimental part. There are 4 tables and 9 references, 3 of which are Soviet.

✓ A single-channel time analyzer for fast particle spectrometry by the time-of-flight method in the range of the millimicroseconds. N. Martalogu, F. Tantte, R. Dumitrescu, L. Korgueva, and M. Molya. *Riv. Phys., Accad. Rep. popolare România* 4, 457-74 (1960) (in Russian).—The scheme and properties of an analyzer based on the differential coincidence method to obtain high efficiency  $\epsilon$  and short resolving time  $r$  are described in detail.  $r = 2.5 \times 10^{-11}$  sec. and  $2.1 \times 10^{-12}$  sec. with  $\epsilon = 100\%$  were obtained for pulses const. in shape and amplitude, produced by specified setups. For fluctuating pulses at the output of an RCA 5819 photomultiplier tube collecting the flashes of a stilbene scintillator, irradiated by a Po-Be source,  $r$  was  $(4.4-4.8) \times 10^{-12}$  sec. with  $\epsilon \sim 80\%$ , and  $(2-2.2) \times 10^{-12}$  sec. with  $\epsilon \sim 55\%$ .  $r$  for pulses from Zn<sup>65</sup> was  $(3.3-4) \times 10^{-12}$  sec. with  $\epsilon \sim 90\%$ . The time-of-flight method, the usual schemes for fast coincidence analysis, and the short resolving time techniques are discussed and elucidated. 23 references.

"Ulceration of the Esophagus."

Prague, Casopis Lekaru Ceskych, Vol 106, No 7, 17 Feb 67, pp 169 - 174

Abstract /Authors' English summary modified/: 7 cases of the ulceration of the lower esophagus are described; dysphagic complaints were in the foreground. Pathogenetic and pathological aspects of esophagus ulcers differ from those of reflux esophagitis. Stenosis of the lower esophagus was found by X-ray, but the ulcers remained undetected during 3 X-ray examinations and esophagoscopy. Tendency of the ulcer to perforate in the mediastinum was recorded 3 times. The esophageal ulcer has no special pathological characteristics; because of the danger of serious complications, best treatment is resection of the lower esophagus. 5 Figures, 1

Abstract: Six new varieties which cannot be related to a single known variety were obtained by crossing a series of forms of soft wheat and by subsequent selection. *Triticum vulgare* var. *tetrastrichon* (M. et S. Korje) is a 4-ranked (*tetrastrichous*) wheat. On the projections of the spike peduncle are

2 spikelets of equal size and equal number of grains. *Triticum vulgare* var. *ramosa* (M. et S. Koric) is a ramos wheat. It is completely identical with the ramos wheat *Triticum turgidum compositum*. *Triticum vulgare* var. *floribunda* (M. et S. Koric) is a multi-flowered wheat. Its spikes contain numerous irregularly grouped flowers (among which many are sterile), and resemble sorghum in appearance. One additional spikelet forms under each of the principal spikelets. These supplementary spikelets are in the same plane with the principal spikelets, are normally developed and contain 2-3 well filled out grains. *Triticum vulgare* var.

TITLE: On the compatibility of glasses in optic fibers

SOURCE: Optiko-mekhanicheskaya promyshlennost', no. 11, 1966, 30-34

TOPIC TAGS: fiber optics, glass fiber, glass property, light transmission

ABSTRACT: In view of the fact that when two types of glass are fused together in a glass fiber they affect each other, unlike two neighboring glass parts in a standard optical instrument, the authors consider experimental data on the influence of heat treatment on the properties of optic fibers. The study consisted of determining the variation of the light transmission and the crystallizing ability of light pipes as a function of the temperature and time of the experiments. Single conductor light pipes of 1 - 1.2 mm in diameter and 200 mm long, at a glass diameter 0.8 - 1.0 mm and a sheath thickness 0.1 mm were tested. Multi-lead light pipes of the same diameter, with each individual lead 5  $\mu$  thick and sheathed with glass of 1  $\mu$  thickness were also tested. The light pipes were prepared by several methods and subjected to different heat treatments. The preparation of the light pipes is briefly described. The transmission was measured with apparatus based on a universal monochromator (UM-2), using a photometric sphere with a selenium photocell. The results have established that when two types of glass are fused together, one glass can stimulate the crystal-

lization of the other, causing the fiber to become opalescent and crystallize, and thus greatly deteriorate the optical properties of the fiber element. This phenomenon is called noncompatibility of two glasses and must be taken into account when choosing the type of glass for the manufacture of optical fibers and parts. It is concluded that compatible glasses must be used to prepare fiber elements subjected to multiple heating cycles and maintaining high values of light transmission, resolution, and frequency-contrast characteristics. The compatibility of various types of Soviet glass brands is briefly discussed. Methods of estimating the compatibility of glasses are proposed. Orig. art. has: 3 tables.

O FAKTICHESKIH KoeffITSIENATAKH TEPLOPEREDACHI SEKTSIONNYKH VODOVODYANYKH PODOGREVATELEY TIPA TEPLOSETI MOSENERGO (On actual heat transfer ratio in sectional water conduit heaters of the Moscow Power System District Heating Type). Teploenergetika, no. 2, P 1956: 31-34.

Study of the operation and performance of the brass conduits with sectional water heaters disclosed a deficiency in the heat distribution. The expected efficiency was not achieved. The experiments proved that foam accumulation in brass conduits diminishes heat transfer. Some recommendations are suggested.

no. 7, 1961, 34, abstract 7 K198 (V sb. Ferrity.  
Fiz. i fiz.-khim. svoystva, Minsk, AN BSSR, 1960,  
643-644)

TEXT: Basic properties and circuit description are given of a pulse generator for the study of ferromagnetic materials. The generator supplies load currents  $\approx 4$  A. The leading edge of current pulse  $\sim 0.02 \mu$  sec, with pulse duration 1 - 20  $\mu$  sec. [Abstracter's note: Complete translation]

fizikal'nyy otdel

Editorial Board: Resp. Ed.: N. M. Sirota, Academician of the  
Academy of Sciences BSSR; K. P. Belov, Professor; Yu. I. Konor-  
skiy, Professor; K. M. Polivanov, Professor; R. V. Talsman, Pro-  
fessor; G. A. Smolenskiy, Professor; N. M. Shol'ts, Candidate of  
Physical and Mathematical Sciences; E. M. Slobolentsev, and  
I. A. Smirnov; Ed. of Publishing House: S. Kholyavskiy; Tech.  
Ed.: N. V. Volobanovich.

PURPOSE: This book is intended for physicists, physical chemists,  
radio electronics engineers, and technical personnel engaged in  
the production and use of ferromagnetic materials. It may also  
be used by students in advanced courses in radio electronics,  
physics, and physical chemistry.

CONTENTS: The book contains reports presented at the Third All-  
Union Conference on Ferrites held in Minsk, Belorussian SSR.  
The reports deal with magnetic transformations, electrical and  
galvanomagnetic properties of ferrites, studies of the growth  
of ferrite single crystals, problems in the chemical and physi-  
cochemical analysis of ferrites, studies of ferrites having  
rectangular hysteresis loops and multicompONENT ferrite systems  
exhibiting spontaneous rectangularity, problems in magnetic  
attraction, highly coercive ferrites, magnetic spectroscopy  
of ferrimagnetic resonance, magneto-optical physical principles  
of using ferrite components in electrical circuits, anisotropy of  
electrical and magnetic properties, etc. The Committee on Mag-  
netism, A. G. V. Veneratuyev, Chairman) organized the con-  
ference. References accompany individual articles.
